

OVERVIEW OF THE DATASET

Source: HR Analytics Dataset (Employee Attrition Dataset – CSV/Excel format)

This dataset contains information about employees within an organization, including demographic details, job-related attributes, compensation, and attrition status. It is commonly used in HR analytics to understand employee turnover patterns and identify factors influencing retention.

The dataset is suitable for business intelligence and exploratory data analysis, especially for building dashboards that support HR decision-making.

The dataset consists of the following columns:

- **EmployeeNumber:** Unique identifier for each employee
- **Age:** Age of the employee
- **Gender:** Gender of the employee (Male/Female)
- **Department:** Department in which the employee works (e.g., Sales, HR, Research & Development)
- **JobRole:** Specific role of the employee within the organization
- **MonthlyIncome:** Monthly salary of the employee
- **JobLevel:** Level or rank of the employee in the organization hierarchy
- **YearsAtCompany:** Total number of years the employee has worked in the company
- **YearsInCurrentRole:** Number of years in the current job role
- **Education:** Education level of the employee
- **OverTime:** Indicates whether the employee works overtime (Yes/No)
- **Attrition:** Indicates whether the employee left the company (Yes/No)

The **Attrition column** is the target variable used to analyze employee turnover and build insights into workforce retention trends.
